

EVLVED

VOL. 02

A FIELD MANUAL

The Fitness *System.*

The training, nutrition and recovery system I actually run. Built to make you lean, conditioned, and confident in your own body. Not theory. The real thing.

BY KEIT

EVOLVE BEYOND.

CONTENTS

What's *inside*.

0 0	Read this <i>first</i> .
0 1	What this is, and what it <i>is not</i> .
0 2	My <i>turning point</i> .
0 3	The <i>training</i> system.
0 4	The <i>exercise</i> library.
0 5	The <i>sample week</i> .
0 6	Form, ego, and what to <i>skip</i> .
0 7	Conditioning, walking, <i>muay thai</i> .
0 8	The <i>nutrition</i> system.
0 9	Sample <i>meals</i> and ingredients.
1 0	Supplements and <i>alcohol</i> .
1 1	The <i>recovery</i> system.
1 2	Travel, work weeks, <i>injury</i> .
1 3	Day one and the <i>last word</i> .

PROMISE

*Run this for ninety days and you will look better, feel better, move better, and be measurably **further** than the version of you who bought it. That is the entire promise.*

N° 00. PREFACE

Read this *first*.

This is not a fitness influencer book. I am not selling you a transformation. I am giving you the system I actually run.

I have trained most of my life. Sports as a kid, weights for years, muay thai for the last few. I have also been the version of myself that drank too much, traveled badly, lost the routine, and got fat. So I am writing this from both sides. The body is not magic. It responds to what you do with it. If you do nothing, it goes soft. If you put in the work, it changes. That is the whole game.

Most fitness PDFs sell you a fantasy. Twelve-week shred, six-pack in sixty days, one weird trick. This one does not. This is what I do, in real life, every week. The training, the meals, the supplements, the recovery, the rules I do not break and the ones I do. If you copy ninety percent of it and adapt the rest to your body, you will get results. That is how it works.

| *"One body. One machine. One chance. Take care of it."*

HOW TO USE THIS MANUAL

Read it once, end to end. Mark the parts that apply to you. Then start. Day one is more important than day thirty. Most people who buy a fitness PDF read it, plan it, and never run it. Do not be one of them. Walk tomorrow morning. Find a gym. Eat one clean meal. Then do it again the day after. That is the entire method.

N° 01

What this is, and what it *is not*.

A lean, conditioned, athletic body. That is the target. Not a bodybuilder. Not a powerlifter. Not a marathon runner.

WHAT LEAN AND CONDITIONED ACTUALLY MEANS

For me, lean and conditioned is a feeling first and a look second. It is having energy. Having drive. Feeling confident enough to take your clothes off. Looking like you train without looking like you live in a gym. Big enough to feel big. Defined enough that people notice. Not chasing abs. Not chasing PRs. Chasing the feeling of being healthy in your own body.

The look that comes from this is athletic. Visible definition in the arms, chest, shoulders. Lean enough that your face looks alive. Strong enough that your clothes fit better. That is the standard. Anyone who tells you that you need a six-pack to be in shape is selling something.

WHAT THIS IS NOT

- This is not a bodybuilder split. I do not chase mass. I am not stepping on a stage.
- This is not a powerlifter program. I do not max out. I do not chase numbers.
- This is not a marathon plan. Cardio is for conditioning, not for personality.
- This is not a transformation course. I am not promising you anything you do not earn.

WHO THIS IS FOR

Someone who wants to look healthy, feel healthy, and stop second-guessing what to do at the gym. Someone who is tired of starting over. Someone who wants the operating system, not another twelve-week shred. If you are that person, the rest of this manual is for you.

THE GOAL

Lean. Conditioned. Athletic. Big enough to feel big. Defined enough to notice. Healthy enough that you actually enjoy it. That is the body this manual builds.

N° 02. STORY

My *turning point*.

If you are at a low point right now, this chapter is for you. I have been there. I came back. So can you.

I was an athlete as a kid. Rugby. Football. Always moving, always playing something. The body was easy because I did not think about it. Then I started traveling and everything fell apart. The routines went. The sports went. The drinking started, and once it started I let it run. I ate what I wanted, drank what I wanted, slept when I wanted, and watched my body change in a way I did not recognise.

I got fat. Not a little. A lot. And I hated it. I hated the way I looked, hated the way I felt, hated the photos I would see of myself. Everything around me felt negative because I was negative. I knew I needed to change but I did not know where to start. The hardest part was not the gym. The hardest part was admitting to myself that I had let it get this bad.

WHAT PULLED ME OUT

Muay thai. That was the unlock. I walked into a gym, started training, and stayed. I made friends there who became my best friends. We trained together, pushed each other, held the same standards. The community is what kept me showing up on the days I would have skipped if I was alone. After muay thai I started lifting weights again to get stronger and bigger for the sport. The two fed each other. The body came back. The mind came back. Everything around me started to feel positive again because I was rebuilding the foundation.

The lesson is not that everyone needs muay thai. The lesson is that you need a thing that makes you show up, and ideally you need people doing it with you. A class. A gym. A training partner. A circle. The fastest way back from a low point is finding people who are already where you want to be, and putting yourself in the room with them often enough that it pulls you up.

IF YOU ARE HERE RIGHT NOW

*Hating your body is the worst feeling in the world. It is also the most fixable. Walk tomorrow morning. Find a gym. Find a class. Show up. The way out is in *through*.*

"Once you start training and seeing results, you start loving yourself again. Then it becomes non-negotiable."

PART ONE

The *training.*

Show up. Train hard. Train smart. Train often. Get the floor right and everything else follows.

N° 03

The *training* system.

Five sessions a week. Forty-five to sixty minutes each. Push, pull, legs. That is the entire structure.

I lift five times a week. The pattern is two or three days on, one day off, repeat. Sessions are short. Forty-five minutes to an hour, not counting a proper stretch before. Anything longer is usually ego or social. I am there to train, to get a pump, to leave better than I came in, and to get on with my day.

THE SPLIT

Push, pull, legs. Three days, repeated. Most weeks I run it once and a half, which is where five sessions per week lands. Some weeks I run it twice. Some weeks once with extra muay thai. The split is flexible. The training is not.

- **Push day.** Chest, shoulders, triceps. The "pressing" muscles.
- **Pull day.** Back, biceps, rear delts. The "pulling" muscles.
- **Leg day.** Quads, hamstrings, glutes, calves.

Why this split? Because it lets each muscle group recover properly while still hitting the gym most days. You are not crushing the same muscles two days in a row. You are not sitting at home four days a week. It is the cleanest balance of frequency, recovery and intensity for the kind of physique we are building.

HOW LONG, AND HOW HARD

Sessions are forty-five to sixty minutes. Stretch first. Move with intent. Pick the exercises that feel right for your body in that gym on that day. Train hard enough that you feel it but not so hard that you blow yourself up for tomorrow. The standard is that you should leave the gym feeling like you did the work. Not destroyed. Just done.

SYSTEM 01

The Training Floor

Frequency: 5 lifting sessions per week.

Pattern: 2 or 3 days on, 1 day off, repeat.

Length: 45 to 60 minutes per session.

Split: Push, Pull, Legs.

Plus: 1 to 2 conditioning sessions per week (muay thai, run, or hard walk).

The floor: if everything falls apart, the minimum is 3 lifting sessions plus a daily walk. Below that you are not training. You are coasting.

N° 04. EXERCISE LIBRARY

The *exercise* library.

These are the lifts I actually use. Pick the ones that work for your body, your gym, and your equipment. If you do not know what an exercise is, look it up. Every name in this manual is searchable.

PUSH. CHEST

- **Dumbbell bench press** (flat). My main chest lift. Safer than barbell, better range of motion.
- **Incline dumbbell bench press.** Hits the upper chest. Build a fuller, more visible chest line.
- **Cable flies.** Constant tension. Best finisher for chest.
- Chest press machine. If dumbbells are taken or your shoulders are off.
- Push-ups. The fallback when you have no equipment. Still works.

PUSH. SHOULDERS

- **Dumbbell shoulder press** (seated). Main pressing movement for shoulders.
- **Incline machine press.** Cleaner alternative on bad days.

- **Lateral raises.** Non-negotiable for visible shoulder width.
- **Rear delt flies.** Most people skip these. Do not skip these.
- Front raises. Optional. The front delts already get hit hard from pressing.

PUSH. TRICEPS

- Cable rope pushdowns.
- Overhead cable extensions.
- Skull crushers (dumbbell or EZ-bar).
- Dips (assisted or bodyweight).

PULL. BACK

- **Reverse-grip lat pulldown.** My main vertical pull. Hits the lats and biceps cleanly.
- **Lat pulldown** (wide-grip and neutral-grip).
- **Seated cable row.** Main horizontal pull. Builds back thickness.
- **Machine row.** Cleaner alternative if your form is off.
- Single-arm dumbbell row.
- Face pulls. For rear delts and rotator cuff health.

PULL. BICEPS

- Dumbbell curls (alternating or both arms).
- Hammer curls.
- Cable curls (rope or straight bar).
- Preacher curls (machine or EZ-bar).

LEGS. QUADS, GLUTES, HAMSTRINGS, CALVES

- **Leg press machine.** Main leg lift. Heavy, safe, controllable.
- **Leg extensions.** Quads in isolation. Always.
- **Hamstring curls** (lying or seated).
- **Calf raises** (standing and seated).
- Hip thrusts or glute bridges (machine or bodyweight).
- Walking lunges (dumbbell).

- Bulgarian split squats. Brutal but effective.

WHAT I DO NOT DO

I do not deadlift. I do not back-squat. The injury risk does not match the reward for the kind of physique I am building. Plenty of people deadlift and squat for life with no problems. I am not telling you not to. I am telling you what I do. The leg press, leg extensions, hamstring curls and lunges build the legs I want with a fraction of the wear on my back and knees. If you are also avoiding heavy compounds for injury reasons, you are not weak for it. You are smart.

SELECTION RULE

*Pick the exercises where you feel the cleanest tension and the best pump. The body responds to **what it feels**. Not what's on the chart.*

N° 05. SAMPLE WEEK

The *sample week*.

This is a week you can run as written. No invention required. Five lifting sessions, one or two conditioning sessions, a rest day. Adjust to your schedule, but the shape stays.

THE WEEK AT A GLANCE

- **Monday.** Push (chest focus).
- **Tuesday.** Pull (back focus).
- **Wednesday.** Legs.
- **Thursday.** Rest. Walk. Stretch. Sauna if you can.
- **Friday.** Push (shoulder focus).
- **Saturday.** Pull (back and biceps).
- **Sunday.** Conditioning. 5 to 10 km run, muay thai, or a long hike.

MONDAY. PUSH (CHEST FOCUS)

EXERCISE	SETS X REPS	NOTES
Flat dumbbell bench press	4 x 8 to 10	<i>Slow on the way down.</i>
Incline dumbbell bench press	3 x 10	<i>Squeeze the chest at the top.</i>
Cable flies (mid)	3 x 12	<i>Full stretch each rep.</i>
Lateral raises	3 x 12 to 15	<i>Light. Strict form.</i>
Rope pushdowns	3 x 12	<i>Lock elbows, full extension.</i>
Skull crushers	3 x 10	<i>Optional finisher.</i>

TUESDAY. PULL (BACK FOCUS)

EXERCISE	SETS X REPS	NOTES
Reverse-grip lat pulldown	4 x 8 to 10	<i>Pull elbows down and back.</i>
Seated cable row	4 x 10	<i>Squeeze the shoulder blades.</i>
Wide-grip lat pulldown	3 x 10 to 12	<i>Builds the V.</i>
Single-arm dumbbell row	3 x 10 each side	<i>Slow and controlled.</i>
Dumbbell curls	3 x 10	<i>No swinging.</i>
Hammer curls	3 x 10	<i>Forearms and biceps.</i>
Face pulls	3 x 15	<i>Healthy shoulders.</i>

WEDNESDAY. LEGS

EXERCISE	SETS X REPS	NOTES
Leg press	4 x 10 to 12	<i>Feet mid-platform. Full range.</i>
Leg extensions	4 x 12	<i>Squeeze the top.</i>
Hamstring curls	4 x 10 to 12	<i>Lying or seated.</i>
Walking lunges (dumbbell)	3 x 12 each leg	<i>Or Bulgarian split squats.</i>
Standing calf raises	4 x 15	<i>Pause and squeeze each rep.</i>
Seated calf raises	3 x 15	<i>Different muscle. Both matter.</i>

FRIDAY. PUSH (SHOULDER FOCUS)

EXERCISE	SETS X REPS	NOTES
Seated dumbbell shoulder press	4 x 8 to 10	<i>Main lift today.</i>
Incline dumbbell bench press	3 x 10	<i>Hit upper chest.</i>
Lateral raises	4 x 12 to 15	<i>Drop set on last set.</i>
Rear delt flies	4 x 12	<i>Cable or dumbbell.</i>
Cable flies (high to low)	3 x 12	<i>Lower chest.</i>
Overhead cable extensions	3 x 12	<i>Triceps long head.</i>

SATURDAY. PULL (BACK AND BICEPS)

EXERCISE	SETS X REPS	NOTES
Lat pulldown (neutral grip)	4 x 10	<i>Hits the lats deep.</i>
Machine row	4 x 10	<i>Chest against the pad.</i>
Single-arm cable pulldown	3 x 12 each	<i>Full range.</i>
Preacher curls	4 x 10	<i>Slow eccentric.</i>
Cable rope curls	3 x 12	<i>Squeeze at the top.</i>
Hammer curls	3 x 10 to 12	<i>Finisher.</i>

SUNDAY. CONDITIONING

One of the following. Pick what your body wants.

- 5 to 10 km run, outdoor or treadmill. Easy pace.
- Muay thai class.
- Long beach walk or hike. 90 minutes plus.
- Stairmaster or incline walk. 30 to 45 minutes.

Sunday is not a punishment day. It is a "keep the engine running" day. If your week was hard, walk. If your week was light, run.

N° 06

Form, ego, and what to *skip*.

Most gym injuries are not bad luck. They are ego. Heavier weight than you can control, slower than your body can recover, in a position your joints did not agree to.

MASTER THE FORM FIRST

If you are new, do this before anything else. Watch videos for every exercise you plan to do. There are good free coaches all over YouTube. You can find them in three minutes. Watch the form, then go to the gym and do the lift with very light weight, almost nothing, and feel where the muscle is working. If you cannot feel it, the form is wrong. Fix the form before you load the bar. This single habit will save you from ninety percent of the injuries that happen to people who skip this step.

If you can afford it, work with a personal trainer for a few sessions. Not for life. Just to learn the lifts. Two or three sessions with a real coach, and you will know more about lifting than ninety percent of people in the gym.

DO NOT EGO LIFT

Pick the weight you can do for ten clean reps with full control. Then add reps before you add weight. The body responds to tension and time, not to whether the weight on the bar impresses the guy next to you. The guy next to you does not care about you. The mirror cares.

WHAT I PERSONALLY SKIP

- **Heavy back squats.** Risk to my lower back is too high for the reward.
- **Deadlifts.** Same reason. Form failure under heavy load is not worth it.
- **Maximum-effort singles.** I am not a powerlifter. I do not need to know my one-rep max.
- **Anything that hurts.** If a movement hurts a joint or feels wrong, I find a different exercise that hits the same muscle. There is always one.

This does not mean these lifts are bad. Plenty of people do them for life. It means they are not worth the risk for me, and they are not worth the risk for most people who just want to look and feel athletic. If you love deadlifting, deadlift. If you do not, do not feel like you need to.

RULE

*If a lift hurts a joint, replace it. If a lift carries injury risk you are not willing to manage, replace it. **The body** you are building does not require any single exercise.*

N° 07

Conditioning, walking, *muay thai*.

Lifting builds the body. Conditioning keeps it usable. You want a body that looks athletic and actually performs like one.

WALKING IS NON-NEGOTIABLE

I walk every single day. Thirty to ninety minutes. Some mornings, sometimes both. It is not optional and it is not just for fitness. Walking is recovery, mental clarity, sunlight, fresh air, time to think. It is the easiest, lowest-friction, highest-return habit in this entire manual. If you do nothing else from this PDF, walk every morning. The change in how you feel within two weeks will sell you on the rest.

MUAY THAI IS WHAT I DO FOR REAL CONDITIONING

Some weeks I train muay thai once or twice. Some weeks more. It is the best full-body conditioning I have found. It builds cardio, agility, coordination, and mental toughness all at once. It also gave me a community when I needed it most. You do not have to do muay thai. You do need a sport or a class that pushes you in a way lifting alone cannot. Boxing, jiu-jitsu, swimming, any team sport, anything where someone is making you work. The point is the push.

RUNNING

I run occasionally. Five to ten kilometres. Easy pace. Not chasing times. Not training for a marathon. The point of the run is to keep the engine warm, not to grind. Once a week is enough. Skip if you got conditioning from another source that week.

WHAT CONDITIONING YOU SHOULD NOT DO

Hours of low-intensity cardio for fat loss. Long jogging sessions five days a week. Spin classes three times a week with no lifting. None of this builds an athletic body. It builds a smaller, weaker version of you. Conditioning is the supplement. Lifting is the meal.

SYSTEM 02

The Conditioning Stack

- **Daily.** Walk 30 to 90 minutes. No exceptions.
- **1 to 2x weekly.** Hard conditioning session. Muay thai, boxing, run, hike, or sport.
- **Weekly.** One sweat session that is not lifting. Sauna counts in a pinch.

PART TWO

The *nutrition.*

You cannot out-train a bad diet. You can also not out-diet a body that does not move. Both at once. Or neither.

N° 08

The *nutrition* system.

Three to four meals a day. Mostly clean weekdays. Slightly relaxed weekends. Same protein and carb foundations every meal, with the actual dishes rotated so you do not get bored.

THE BASIC STRUCTURE

I eat three to four meals per day. Breakfast is locked. Lunch and dinner rotate, but the ingredients underneath stay the same. There is always a protein. There is almost always a starch. There are almost always vegetables. The names of the meals change. The macros do not.

- **Breakfast.** Eggs and a yoghurt bowl. Same most days.
- **Lunch.** Protein, rice or potato, vegetables.
- **Dinner.** Protein, starch, vegetables, or pasta and seafood.
- **Post-workout.** Protein shake.

HOW STRICT AM I

I do not weigh my food. I do not count calories. I have eaten this way long enough that I know what my body needs. I made my life easier by hiring a chef who weighs ingredients for the weekday meals, so the inputs are clean and the math mostly takes care of itself. Most of you will not do that. The principle still works. Set up your weekdays so the food decisions are already made. Stock the same proteins and starches every week. Cook in batches if you need to. The point is to remove the daily decision of "what should I eat" because that is the decision people fail at.

WEEKDAY VS WEEKEND

Weekdays I eat clean. The chef-made meals during the week mean I do not even have to think about it. Weekends I relax. I will go out for dinner. I will eat what I feel like. I will enjoy life. I am not a bodybuilder and I do not aim to be. The key is that the weekend does not undo the week. One nice dinner does not destroy your physique. Two days of binging does. The line is somewhere around enjoying your weekends without using them as a reset button on the work you did Monday through Friday.

This is the same architecture as the Discipline System. Weekdays carry the work. Weekends carry the joy. Both are part of the system. Skip either one and the system breaks.

PRINCIPLE

*Eating clean is not a punishment. It is a way of taking care of **the only body you get**. Comfort food on a weekend is allowed. Comfort food every day is not.*

N° 09. MEAL LIBRARY

Sample **meals** and ingredients.

These are the meals I actually eat. Use them, copy them, swap proteins, swap starches. You do not need a chef. You need to know what to put on the plate.

BREAKFAST

STANDARD BREAKFAST

Boiled eggs and yoghurt bowl

4 to 5 boiled eggs. Greek yoghurt or natural yoghurt, one bowl. Topped with granola, fresh fruit (berries, banana, mango), a drizzle of natural honey, and a dash of cinnamon.

VARIATION

Scrambled eggs on sourdough with avocado

3 eggs scrambled in butter or olive oil. Half an avocado on sourdough. Black pepper and salt. Side of berries.

TRAVEL BREAKFAST

Hotel buffet rules

Eggs (omelette or boiled, no oil), smoked salmon, fresh fruit, plain yoghurt, no pastries, no juice, black coffee. This works in almost every hotel in the world.

LUNCH

STANDARD LUNCH**Chicken, rice, vegetables**

200g grilled chicken breast or thigh. One cup of jasmine, basmati or brown rice. Steamed or sauteed vegetables (broccoli, spinach, asparagus, green beans, carrots). Olive oil, lemon, salt, pepper, herbs to taste.

VARIATION**Beef and rice**

Lean beef strips or grass-fed mince. Rice. Vegetables (peppers, onions, broccoli). Soy sauce, garlic, ginger, sesame oil for flavor.

VARIATION**Salmon and quinoa**

Pan-seared or baked salmon fillet. Quinoa or brown rice. Greens (kale, spinach, rocket). Olive oil and lemon dressing.

DINNER

STANDARD DINNER**Chicken, sweet potato, vegetables**

Grilled or baked chicken. Sweet potato (roasted or mashed). Steamed or roasted vegetables. Side salad with olive oil dressing.

VARIATION**Prawn or fish pasta**

Whole-wheat or regular pasta. Prawns, white fish, or salmon. Garlic, chilli, olive oil, lemon, parsley. Side of greens.

VARIATION**Beef stir-fry**

Lean beef. Mixed vegetables (broccoli, peppers, mushrooms, bok choy). Rice or rice noodles. Soy, garlic, ginger.

POST-WORKOUT

ALWAYS

Protein shake

One scoop of whey protein (about 25g protein). Water or unsweetened almond milk. Optional: banana, frozen berries, peanut butter, oats. Drink within an hour of finishing your session.

THE SHOPPING LIST

What lives in my fridge and pantry every week.

Proteins. Eggs, chicken breast, chicken thigh, lean beef, salmon, white fish, prawns, Greek yoghurt, whey protein.

Carbs. Rice (jasmine, basmati, brown), sweet potato, regular potato, oats, quinoa, sourdough, pasta.

Fats. Olive oil, butter, avocado, nuts, peanut butter (natural), nut butters.

Vegetables. Broccoli, spinach, kale, asparagus, green beans, carrots, peppers, mushrooms, onions, garlic, tomatoes, cucumber, leafy greens.

Fruit. Berries, banana, mango, apples, oranges, lemon.

Pantry. Honey, cinnamon, granola, soy sauce, sesame oil, herbs, sea salt, black pepper.

If you have ninety percent of this list in your kitchen, you can cook every meal in this manual without a recipe.

N° 10

Supplements and *alcohol*.

Supplements are not magic. They support the work you are already doing. Below is what I take. The list is honest, not a sponsored read.

THE TRAINING STACK

- **Pre-workout.** Before the gym. Pick a clean brand, not the highest-stim one on the shelf.
- **Creatine monohydrate.** 5g daily. Taken every day, training day or not. The most studied supplement that exists. Cheap. Worth it.

- **Whey protein.** One shake post-workout, sometimes a second shake later in the day if I am low on dietary protein.

THE GENERAL HEALTH STACK

- **Magnesium.** For sleep, recovery, muscle function.
- **Zinc.** Immune system, recovery.
- **Iron.** Energy. Be careful with dosing. Too much is bad.
- **Vitamin C.** Daily.
- **Vitamin D.** Especially if you are not getting daily sun.
- **Calcium.** Bone health.
- **Fish oil (omega-3).** Joint health, brain, recovery.
- **Collagen.** Skin, joints, hair.

SLEEP, OCCASIONALLY

- **Melatonin or sleep gummies.** Occasionally, when I cannot wind down or I am crossing time zones. Not a daily thing. Use it as a tool, not a crutch.

WHAT I DO NOT TAKE

Fat burners. Mass gainers. Anything promising rapid results. The supplement industry sells a lot of products that do nothing. The basics work. Almost everything else is marketing.

ALCOHOL

I drink only on certain occasions. Special dinners, real celebrations, the occasional weekend out. I used to drink a lot more. Cutting it back was one of the biggest single changes to how I look and feel. If you are serious about your body, alcohol is the first lever to pull. You do not have to quit. You have to stop drinking like it is just water.

THE TRUTH

*If you train hard, eat clean and drink heavily, you are running the engine and pouring sand in the tank. **Pick one.***

PART THREE

The *recovery*.

Recovery is not the opposite of training. It is part of the training. Skip it and the body breaks down faster than it builds.

N° 11

The *recovery* system.

Sleep, stretch, sauna, ice, massage. These are not luxuries. They are how the body adapts to the work you are doing. Skip them and your training stops working.

S L E E P

Eight hours, max. Most days seven. On hard push days, six. Below six, my output drops, mood collapses, and decisions get worse. The number for you may be slightly different. The principle is the same. Know your number. Defend it. Sleep is not where you cut to make more time. The hours you save by sleeping less are the hours you give back tomorrow in worse training, worse decisions and worse food.

S T R E T C H I N G

I stretch before every training session. Not for ten minutes. Just enough to wake the body up and check what is tight or sore. Once a week, I get a professional stretch service that comes to the house. If you do not have that option, ten to fifteen minutes of focused stretching after each training session is plenty. Hips, hamstrings, lower back, shoulders, calves. The areas that lock up if you ignore them.

S A U N A A N D I C E

One or two times a week. Sauna for fifteen to twenty minutes. Ice bath for two to three minutes. Either separately or contrast (sauna, then ice, then sauna). Both have real benefits for recovery, circulation and inflammation. If you do not have access, hot shower and finish on cold gets you most of the way there. It is not the same, but it is not nothing.

M A S S A G E

I keep massages regular. Once every week or two. Pay for it if you can. It is preventative care. It catches the small things before they become injuries. If massage is not in the budget, foam rolling and a lacrosse ball will do most of the same work. Put aside fifteen minutes after a hard week and work the lower back, glutes, calves and shoulders. Painful at first. Useful always.

INJURY SYSTEM

Injuries happen. Mine just did. The question is not whether you will get hurt. It is what you do when it happens. Three rules.

- 01 **Stop.** If you pull a muscle, especially in the back, you stop. You do not train through it. You walk, you stretch carefully, you sleep, you let it heal. A week of patience saves three months of compensating.
- 02 **Train around.** Bruises, soreness, minor stuff. Keep training. Lower the weight. Pick a different exercise. Move what does not hurt. Most "injuries" are minor and go away faster if you keep moving.
- 03 **Rebuild from the floor.** Major injury or surgery (like my bicep), you reset. First few days, do nothing. Then start walking. Then light gym work for the parts of the body that still work. Slowly add back. The system bends. It does not break.

SYSTEM 03

The Weekly Recovery Stack

- **Daily.** 7 to 8 hours sleep. Walk. Stretch before training.
- **1 to 2x weekly.** Sauna and/or ice.
- **1x weekly or fortnightly.** Massage or deep stretch.
- **Always.** Listen to the body. Pain is data, not weakness.

N° 12

Travel, work weeks, *injury.*

Real life is travel days, work explosions, social pressure, late nights, surgeries. The system has to survive all of it. Below is what I actually do.

TRAVEL

The hotel must have a gym. If it does not, there is a gym near it. Pick the hotel partly on this. Long-haul flights (twelve hours plus, time zones), I rest the day I arrive. I climatize, hydrate, sleep, eat clean. Day

two, I train. The first session back after a long flight is a half session. The second is full. By day three, the routine is back.

WORK WEEKS FROM HELL

Training is non-negotiable. Cut the length, cut the volume, do not cut the session. A twenty-minute push session counts. A ten-minute walk counts. The week where you skipped completely is the week where the next week starts harder. Do not let yourself off the hook just because the calendar got loud.

SOCIAL PRESSURE

People will tell you that you are overdoing it. Some will be friends. Some will be family. Some will be the version of yourself that wants to stay home and eat takeaway. Ignore all three. It is your body, your life, your standards. You owe nobody an explanation for taking care of yourself.

BAD TRAINING DAY

Push through. Lift lighter. Lower the weight, not the standard. Get the sweat in. Leave the gym having done the work, even if it was not your best work. Do this enough times and you find that the bad days are rare, and the truly bad days even rarer.

SERIOUS INJURY OR SURGERY

Walk daily. Even if just slowly, even if just for fifteen minutes. Do not lie in bed. Movement is recovery. Hit the gym every two or three days, even if it is just stretching or training the side that still works. Eat clean. Sleep. Be patient. The body comes back if you do not abandon it.

I am writing this section while recovering from bicep surgery. Three weeks in. Walking every day. Light work in the gym. Working the legs. Stretching. The body will be back. The discipline never went anywhere.

PRINCIPLE

*When the body breaks, the discipline does not. **The form changes.** You do what you can do. You stop doing what you cannot. You do not pretend the injury cancels the system.*

N° 13. DAY ONE

Day one and the *last word*.

Tomorrow morning is day one. This is what you do.

- 01 Wake up. Walk for thirty minutes. No phone scrolling.
- 02 Eat the breakfast on page 16 (eggs and yoghurt). Drink water.
- 03 Find a gym. Sign up today. If money is tight, pick the cheapest one. If money is non-existent, watch YouTube videos for bodyweight push, pull, leg routines and train at home. There is no excuse big enough.
- 04 Do one training session today. Anything. The Monday push day from page 12, or just twenty minutes of any movement that elevates your heart rate.
- 05 Eat one more clean meal today. Page 17 or 18.
- 06 Sleep seven to eight hours.

Tomorrow, do it again. Then again. By the end of week one, the routine starts running you. By week four, you start seeing changes. By week twelve, you do not recognise yourself. That is how this works. There is no faster route, no shortcut, no hack. There is only the work, done consistently, for long enough.

THE LAST WORD

If you forget every page, every exercise, every meal, every supplement in this manual, keep this.

You have one body. One machine. One chance. We do not get a second one. Whatever you do to it, for it, or against it, is the body you will live in for the rest of your life. The choices you make today are the body you will look at in the mirror in ten years.

Most people will read a manual like this and never run it. Most people will keep saying they will start Monday. Most people will live their entire life inside a body they do not love because they chose comfort over work for too many years in a row. Do not be most people.

I am not selling you a transformation. I am not a fitness influencer. I am someone who lost the plot, found it again, and built a system that keeps me on it. The system is in this PDF. What you do with it is on you.

One body. One machine. One chance. Take care of it.

EVLVED

Evolve *beyond.*

You have the system. Now you run it. The body responds to consistency, not to information. Show up tomorrow. And the day after.
